

# MACSIS v5010 / 835 Testing – Aug. 31

---

## **Background:**

In the July 22, MACSIS communication, the Boards and Providers were notified that a new 837 testing procedure was being implemented. This testing procedure went into effect on August 5. In addition to the new procedures, it was also communicated that 837 v5010 and 835 testing would begin on September 1.

Due to many factors, 837 v5010 and 835 testing will not commence on September 1. It is anticipated that programming as well as ODMH and ODADAS acceptance testing will be complete by mid-October. Until this work is completed, MACSIS provider testing will not begin as expected on September 1. Please note that all other aspects of this July 22 communication remain valid.

As development and user acceptance testing proceeds, additional communication will be sent. Please hold all 837 v5010 and 835 testing requests until further notice.

Once MACSIS testing does open for providers, ODMH will perform testing activities 7 days a week until all providers are tested.

## **Boards – Action Required:**

Please communicate with providers that 837 v5010 and 835 testing will not begin until mid-October. The actual date will be communicated as soon as it is known.

## **Providers – Action Required:**

Please work with your software vendors to ensure your files are v5010 compliant.

If you have any questions, please contact the MACSIS Help Desk.
